DETAILED ACTION

Status of the Claims

1. The amendments filed 2 February 2006 have been entered. Applicants have cancelled claim 60. Claims 54-59 and 61-76 are pending and under examination.

Withdrawal of Rejections/Objections

- 2. The objection to claim 61 is hereby withdrawn in view of Applicant's amendments to the claim.
- 3. The 35 U.S.C. 112 2nd paragraph rejections of claims 54 and 60, as presented in Sections 6 and 7, of the previous Office action, respectively, are hereby withdrawn. The former because Applicants arguments are persuasive, the later because of said cancellation of the rejected claim.
- 4. The 35 U.S.C. 112 1st paragraph rejections, as presented in Sections 8-10 of the previous Office action is hereby withdrawn.

Response to Arguments

5. Applicant's arguments with respect to claims 54-59 and 61-76 have been considered but are most in view of the new ground(s) of rejection.

New Rejections

Claim Rejections - 35 USC § 112

6. The following is a quotation of the first paragraph of 35 U.S.C. 112:

Application/Control Number: 10/822,938

Art Unit: 1653

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

7. Claims 54-59 and 61-74 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claims contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention.

The claims are drawn to methods of producing collagen monomers by fermenting collagen contain tissues with any microorganism (claims 54-59, 61-63 and 65-67) and from the genus *Bacillus* (claims 64 and 68-76), and subsequently adding enzymes/acid and precipitating out the monomeric form. Thus, the claims are drawn to an unlimited number of microorganisms used in the fermentation step, which run in the range of millions for the broad claims drawn to microorganisms (claims 54-59, 61-63 and 65-67) and the thousands for the more limited claims drawn to the genus *Bacillus* (claims 64 and 68-76). Thus, a skilled artisan will be required to determine which exact species of microorganism works at all in the claimed invention. Furthermore, the specification, does not allow the disclosure to the public and skilled artisan required in order to exactly reproduce the claimed invention. Thus, there is a considerable expectation that undue experimentation will be expected and thus the claims are not enabled.

The factors to be considered in determining whether undue experimentation is required are summarized In re Wands 858 F.2d 731, 8 USPQ2nd 1400 (Fed. Cir, 1988). The court in Wands states: "Enablement is not precluded by the necessity for some

Art Unit: 1653

experimentation such as routine screening. However, experimentation needed to practice the invention must not be undue experimentation. The key word is 'undue,' not 'experimentation.' " (Wands, 8 USPQ2d 1404). Clearly, enablement of a claimed invention cannot be predicated on the basis of quantity of experimentation required to make or use the invention. "Whether undue experimentation is needed is not a single, simple factual determination, but rather is a conclusion reached by weighing many factual considerations." (Wands, 8 USPQ2d 1404). The factors to be considered in determining whether undue experimentation is required include: (1) the quantity of experimentation necessary, (2) the amount or direction or guidance presented, (3) the presence or absence of working examples, (4) the nature of the invention, (5) the state of the prior art, (6) the relative skill of those in the art, (7) the predictability or unpredictability of the art, and (8) the breadth of the claims.

In the instant case, undue experimentation will be expected because Applicants have not even attempted to provide a single species of the claimed genus'. Rather, they have provided in the specification, that the genus' *Bacillus*, *Lactobacillus* and yeast will all work. The working examples simply state that "A field isolate Gram (+) bacterium, belonging to the genus Bacillus, was used in the fermentation process utilized to extract collagen from the tissues." (p. 19, 1st line, 1st paragraph). There are to date 193 different species of *Bacillus* and Applicants have not disclosed even a single species from this genus (see DSMZ document) which they used in their claimed invention. The problem in doing so, is that a skilled artisan is not going to know which species Applicants have used and thus may not be able to successfully reproduce

Art Unit: 1653

Applicants results of obtaining mostly collagen monomers because a skilled artisan will realize that not every microorganism will work with the claimed invention because each microorganism produces its own unique bi-products depending on whether it is an aerobe, obligate aerobe, anaerobe, obligate anaerobe or facultative anaerobe, and % oxygen environment and culture medium. For some organisms, this will mean that an environment that is strictly reducing will be achieved, for others, the complete opposite. Whether or not, however, each microorganism will produce the requisite enzymes that will successfully breakdown collagen is a matter which is left to be determine by the skilled artisan. In the case of Bacillus, while all species of this genus are Gram (+) aerobes, some grow at acidic pH's such as that of Bacillus acidocaldarius while others like Bacillus subtilis grow at neutral pH's. This may be an absolutely critical piece of information that Applicants have chosen not to disclose to the public and thus a skilled will necessarily have to perform undue experimentation in order to figure out which of the 193 species works the best and which one Applicants may or may not have used themselves. This leads a great deal of unpredictability as well, when it a skilled artisan has no idea which species to use, because there is no way even trying to guess which ones with similar characteristics to Applicants would produce the same sort of enzymes which ferment and degrade the collagen. Furthermore, Applicants recognition of the fact that different microorganisms produce different enzymes is apparent in the specification as on p. 4, 3rd sentence it is stated: "Microorganisms are capable of generating a wide array of molecules as end points to fermentation." But which end point is critical for the claimed invention is disclosed ambiguously at best.

Art Unit: 1653

The enablement requirement is clearly predicated on whether or not undue experimentation will be required, not how much experimentation, just simply that it is undue. In this case, it is evident that undue experimentation will necessarily be the case because Applicants have not disclosed in accordance with the 35 U.S.C. 112 1st paragraph statute because clearly the specification does not contain the manner and process of making the claimed invention, in such full, clear, concise, and *exact terms* so as to enable any person skilled in the art to which it pertains, to make and use the invention and they have not set forth the best mode contemplated by the inventor of carrying out his invention.

Conclusion

- 8. No claim is allowed.
- 9. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Suzanne M. Noakes, Ph.D. whose telephone number is 571-272-2924. The examiner can normally be reached on Monday to Friday, 7.30am to 4.00pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Jon Weber can be reached on 571-272-0925. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
